

IN THE SPECIFICATION:

Please replace paragraph [0065] with the following paragraph:

[0065] Branch B leads to block 310, where the transmitter 200 forms a quality value for the weighting coefficient data signalling it has received. In block 312B, the transmitter 200 forms weighting coefficients by means of the quality value for the weighting coefficient data signalling and the signalling itself. A decision on the reliability of the signalling can be made by monitoring the quality value of the signalling: if the signal containing the signalling has propagated in a low-quality channel, it may not be sufficiently reliable to enable a good decision to be made for changing the weighting coefficients by means of the weighting coefficient data signalling. A quality value is formed similarly as described in connection with block ~~308~~306.
